

Architecture: Microservices

17-313 Fall 2024

Foundations of Software Engineering

<https://cmu-17313q.github.io>

Eduardo Feo Flushing

Administrivia

- Project 2C has been released
 - Due October 10th
- First Sprint Checkpoint Presentations
 - Thursday during recitation time

Smoking Section

- Last **two** full rows

Learning Goals

- Contrast the monolithic application design with a modular design based on microservices.
- Reason about tradeoffs of microservices architectures.
- Principles of microservices: how to benefit and avoid their pitfalls

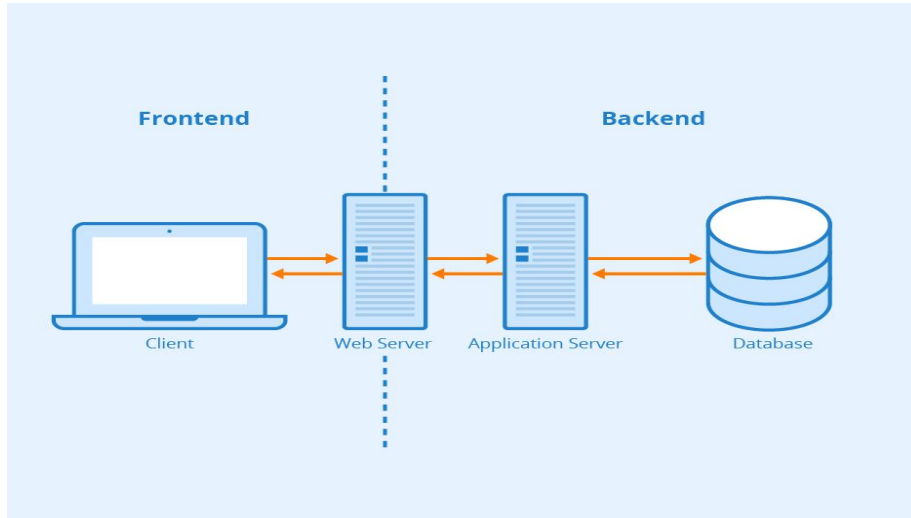

Outline

- From Monoliths to Service Oriented Architecture
 - Case Study: Chrome Web Browser
- Microservices
 - Monolith vs Microservices
 - Advantages
 - Challenges
- Microservices: Principles
- Serverless

Before we get to
microservices...

MONOLITHS

Monolithic styles

Source: <https://www.seobility.net> (CC BY-SA 4.0)

Monolithic styles: MVC Pattern (e.g., NodeBB)

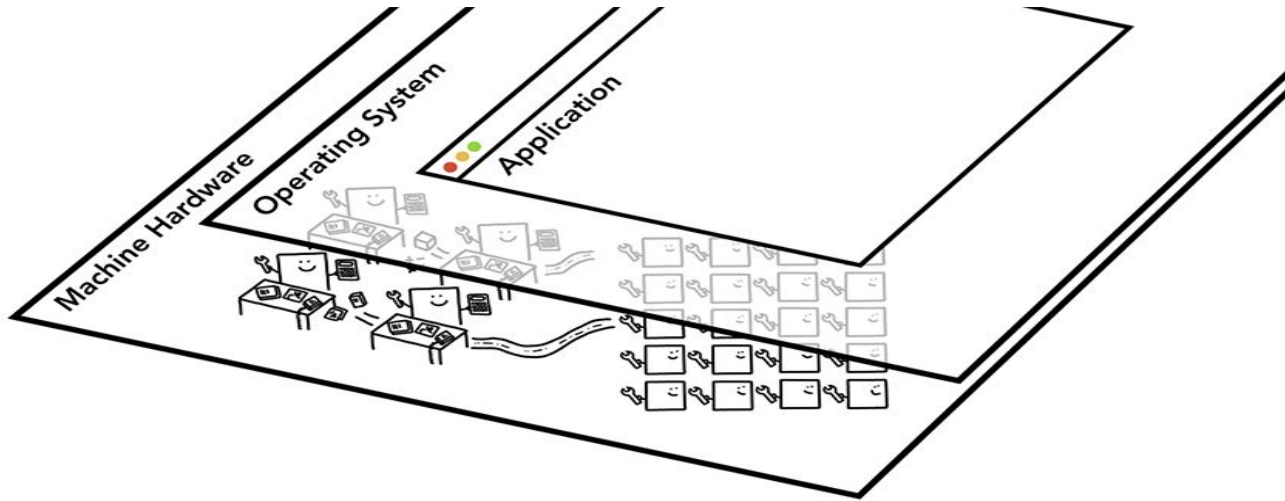

Separation of concerns

SERVICE-ORIENTED ARCHITECTURE

Chrome

Web Browsers

Service-oriented Architecture

- Ability to change components independently
- Independent processes (Isolation, Security)
- Focusing on doing one thing well

MICROSERVICES

“Small autonomous services that work well together”

Service	Description
frontend	Exposes an HTTP server to serve the website. Does not require signup/login and generates session IDs for all users automatically.
cartservice	Stores the items in the user's shopping cart in Redis and retrieves it.
productcatalogservice	Provides the list of products from a JSON file and ability to search products and get individual products.
currencyservice	Converts one money amount to another currency. Uses real values fetched from European Central Bank.
paymentservice	Charges the given credit card info (mock) with the given amount and returns a transaction ID.
shippingservice	Gives shipping cost estimates based on the shopping cart. Ships items to the given address (mock)
checkoutservice	Retrieves user cart, prepares order and orchestrates the payment, shipping and the email notification.

Monoliths vs Microservices

Activity: In teams of 3-4

What are the consequences of this architecture? On:

- Scalability
- Reliability
- Performance
- Development
- Maintainability
- Testability
- Ownership

Advantages of Microservices

- Ship features faster and safer
- Scalability
- Target security concerns
- Allow the interplay of different systems and languages, no commitment to a single technology stack
- Easily deployable and replicable
- Embrace uncertainty, automation, and faults

Microservice challenges

- Too many choices
- Delay between investment and payback
- Complexities of distributed systems
 - network latency, faults, inconsistencies
 - testing challenges
- Monitoring is more complex
- More system states
- More points of failure
- Operational complexity
- Frequently adopted by breaking down a monolithic application

MICROSERVICES: PRINCIPLES

Principles

Sam Newman's Principles of Microservices

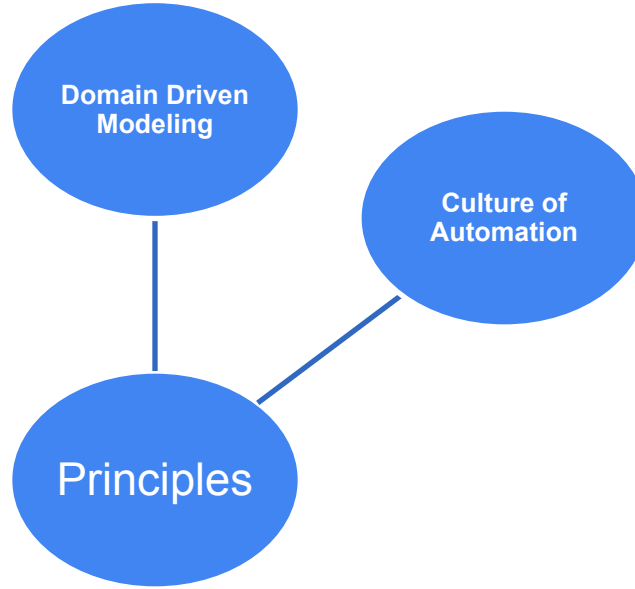

Domain Driven
Modeling

Principles

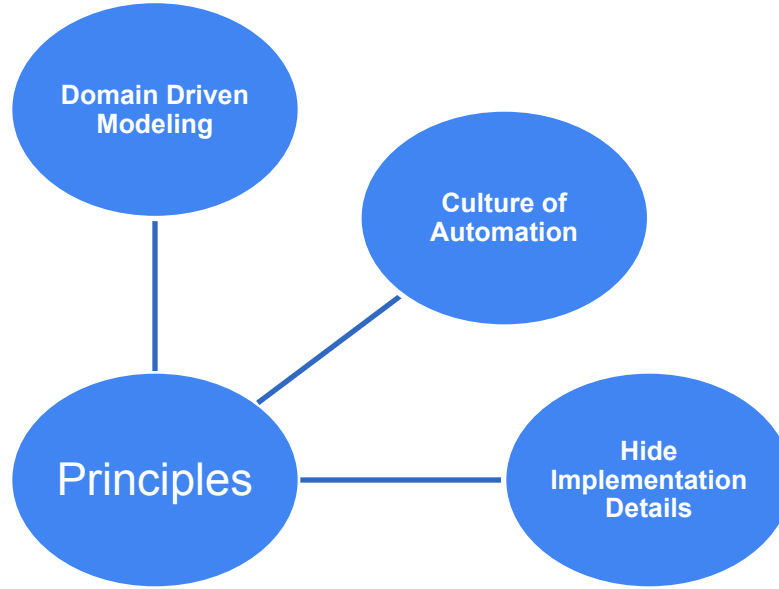

Sam Newman's Principles of Microservices

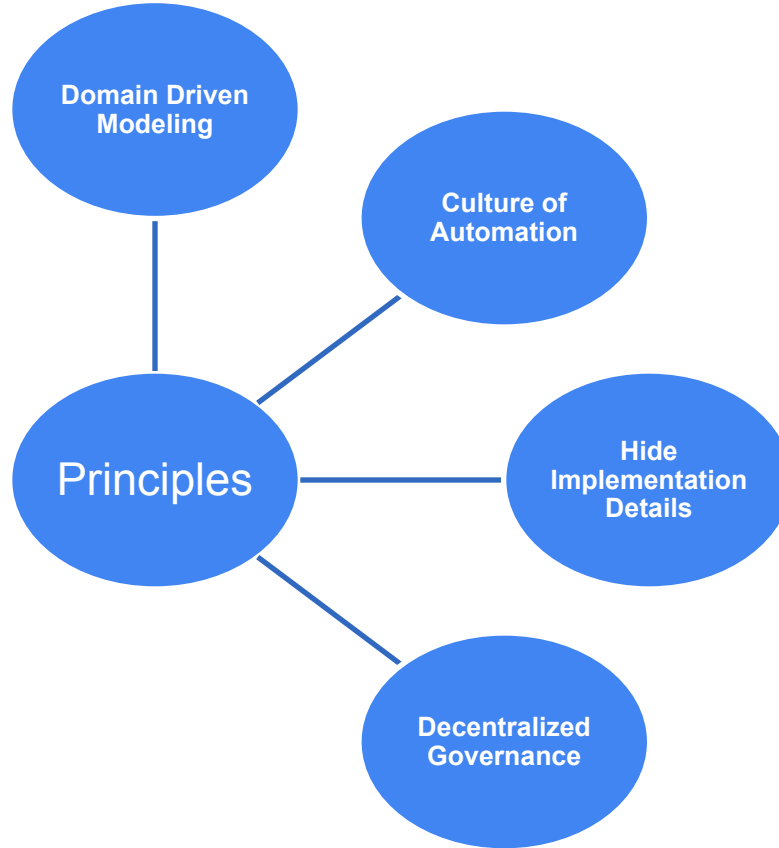

Sam Newman's Principles of Microservices

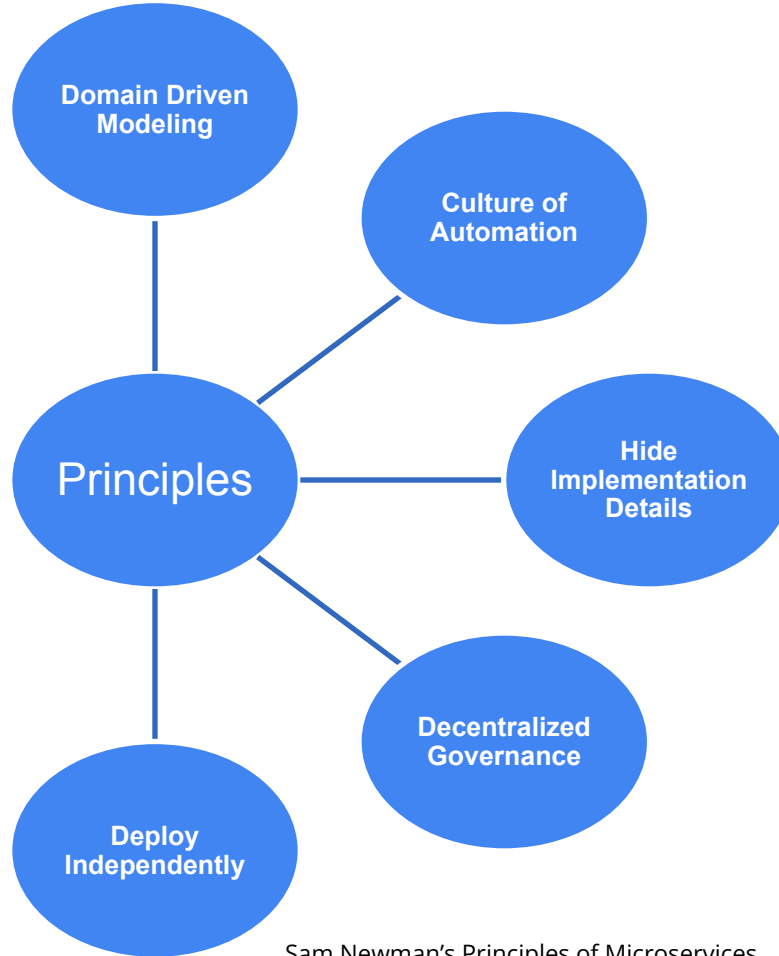

Sam Newman's Principles of Microservices

Sam Newman's Principles of Microservices

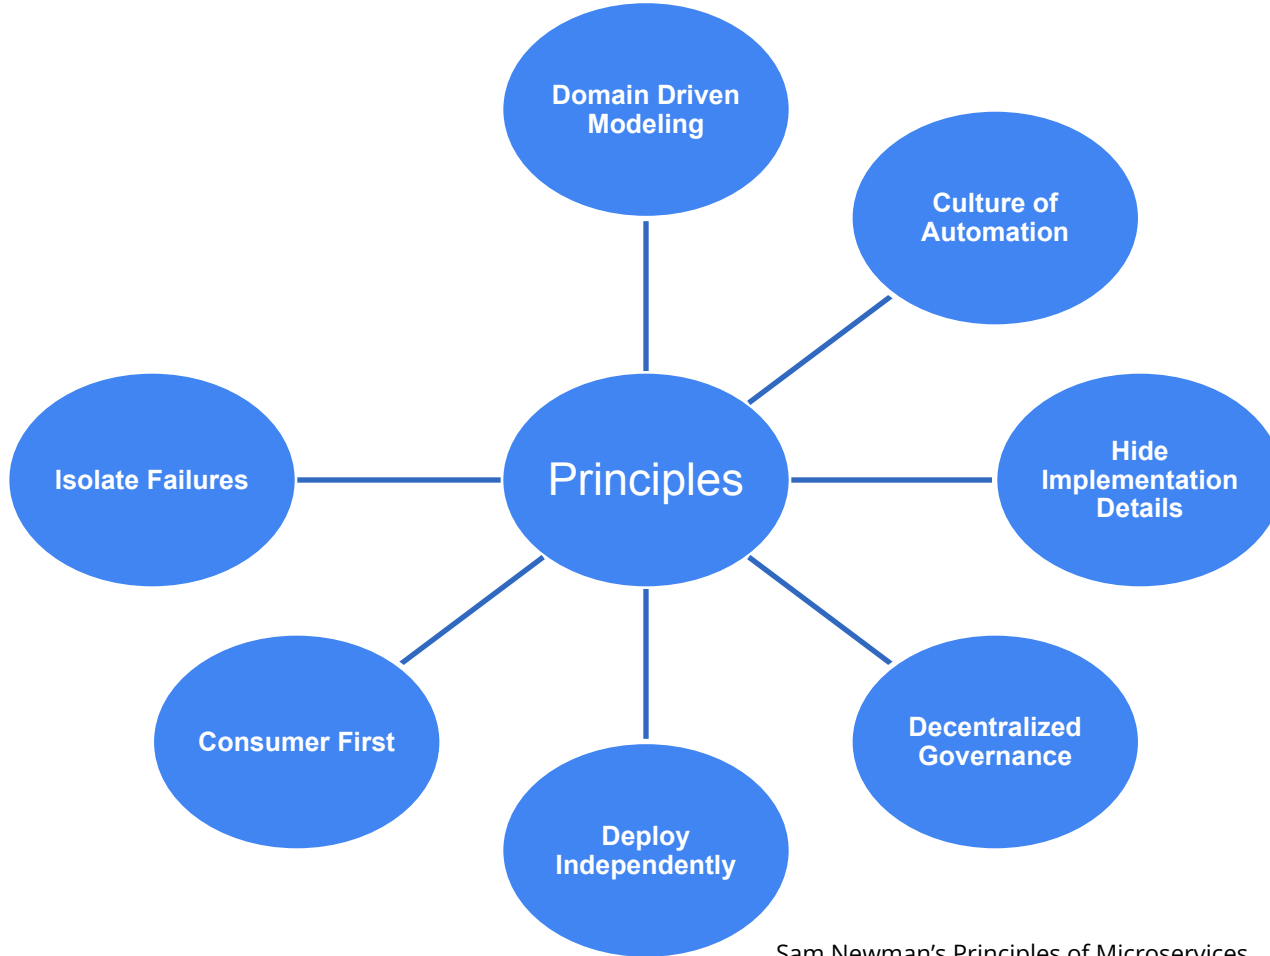

Sam Newman's Principles of Microservices

Sam Newman's Principles of Microservices

Sam Newman's Principles of Microservices

Sam Newman's Principles of Microservices

Principle 1: Domain-driven modeling

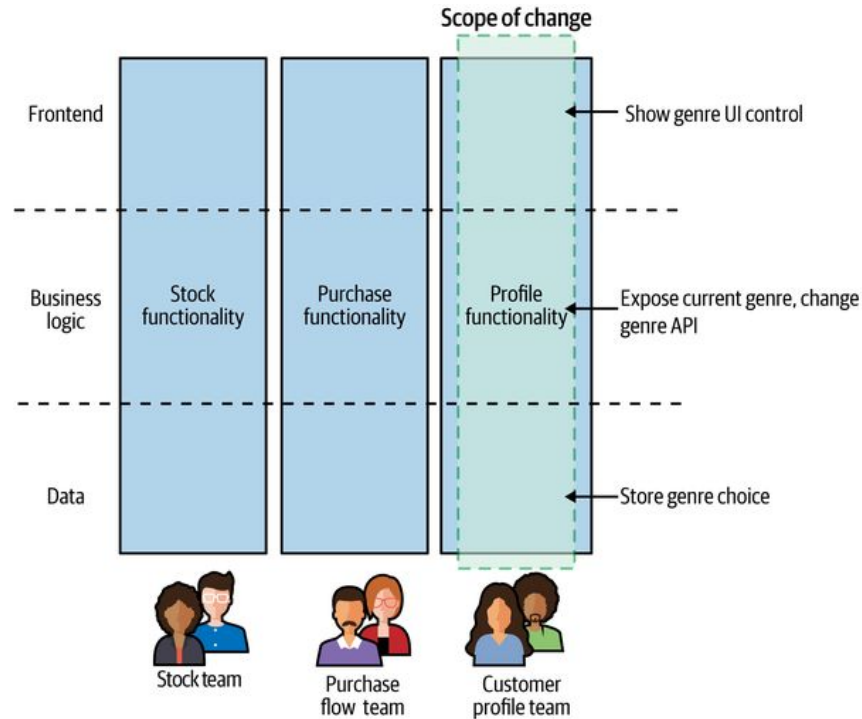

- Model services around business capabilities

Principle 1: Domain-driven modeling

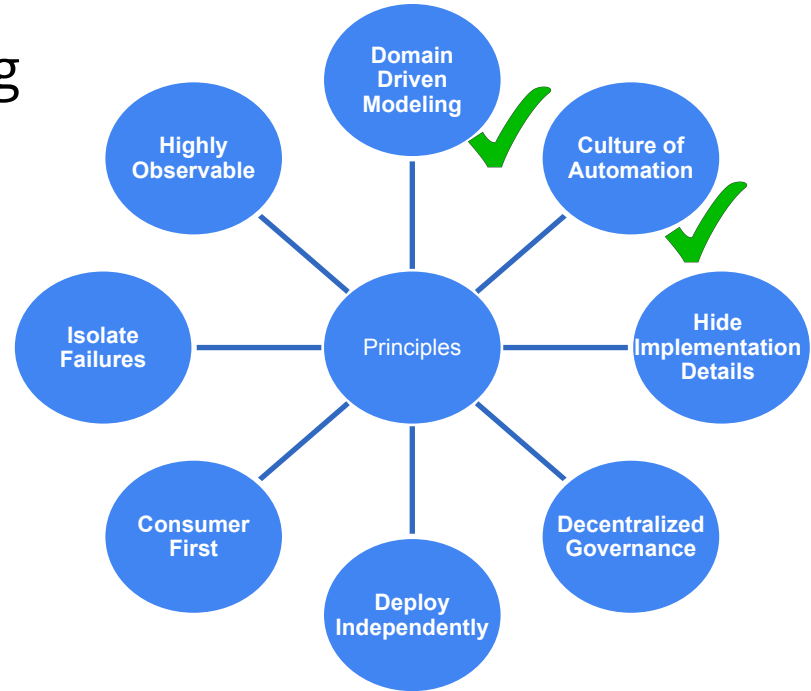

Principle 1: Domain-driven modeling

Principle 2: Culture of Automation

- API-Driven Machine Provisioning
- Continuous Delivery
- Automated Testing

API-Driven Machine Provisioning

Example: Infrastructure as code (IaC)

Image source: <https://learn.microsoft.com/en-us/devops/deliver/what-is-infrastructure-as-code>

Continuous Delivery

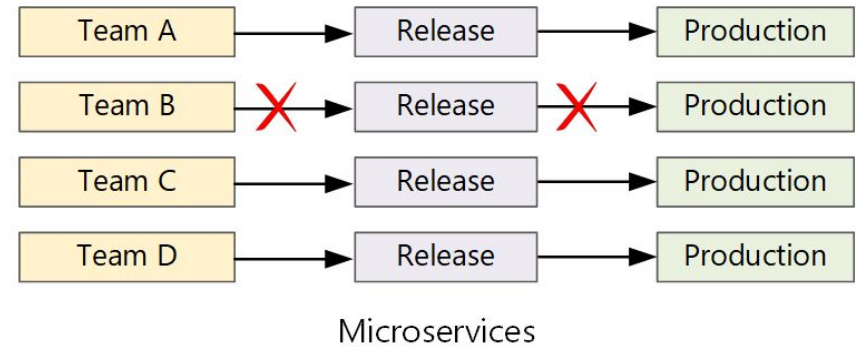

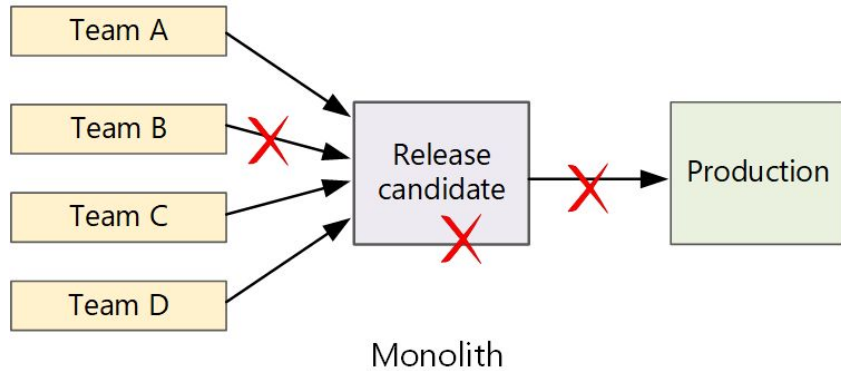

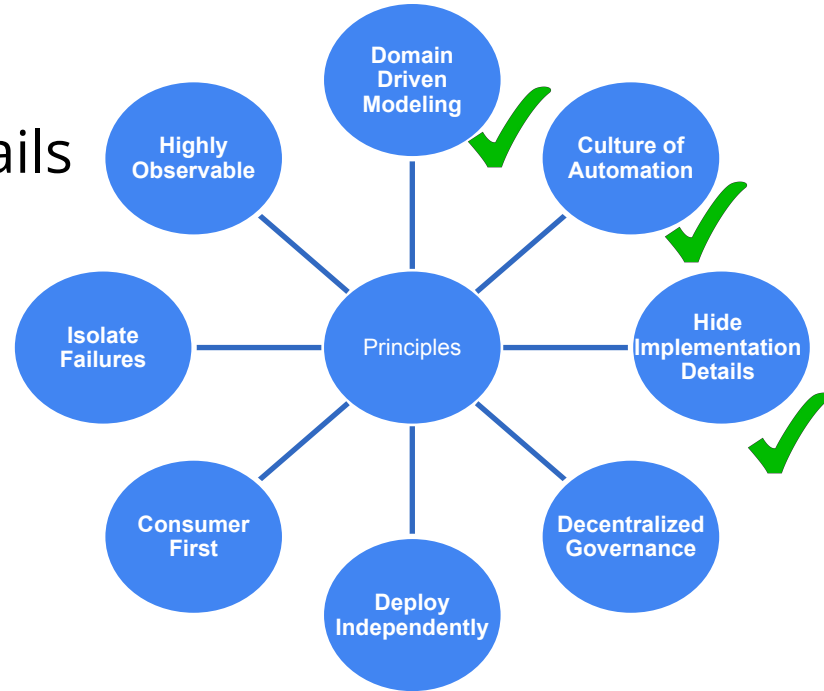

Image Source: <https://learn.microsoft.com/en-us/azure/architecture/microservices/ci-cd>

Principle 3: Hide implementation details

- Design carefully your APIs
- It's easier to expose some details later than hide them
- Do not share your database!

Principle 3: Hide implementation details

Recall: Encapsulation in OOP

Sharing database: Anti-pattern

Principle 4: Decentralized Governance

- Mind Conway's Law
- You Build It, You Run It
- Embrace team autonomy
- Internal Open Source Model

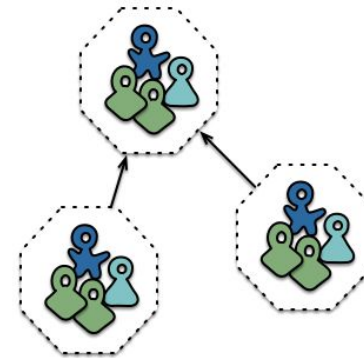

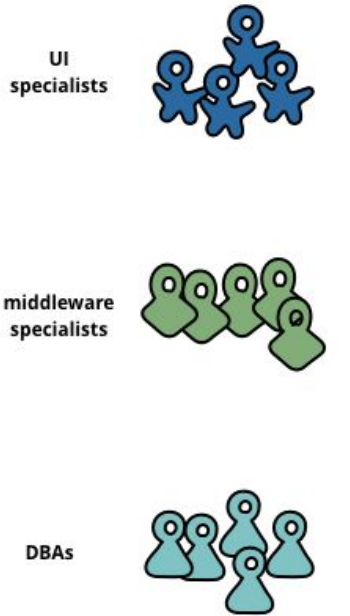

Mind Conway's Law

"Organizations which design systems are constrained to produce designs which are copies of the communication structures of these organizations"

- Melvin Conway (1967).

Mind Conway's Law

“Products” not “Projects”

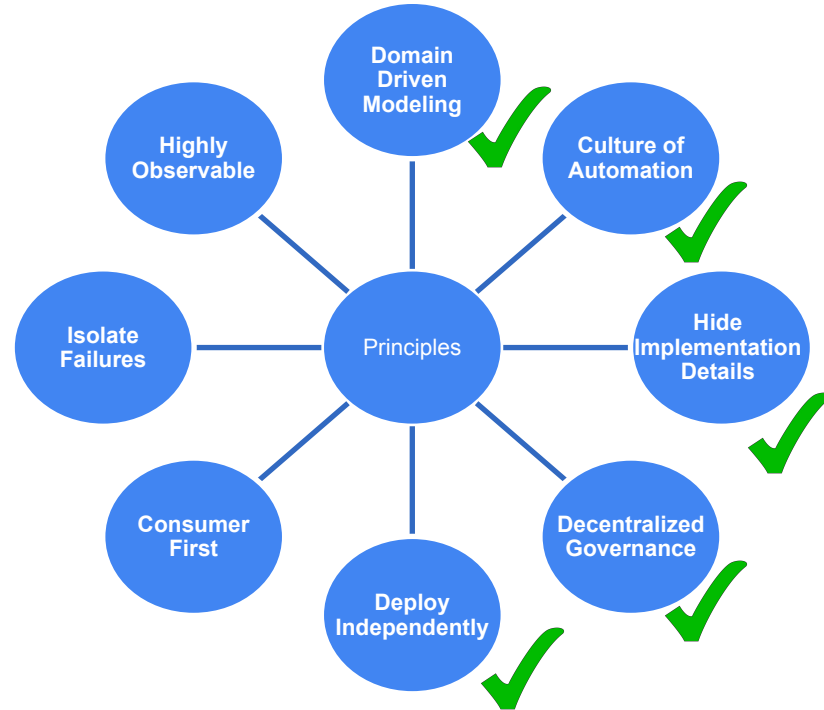

YOU BUILD IT YOU RUN AWAY IT

“The traditional model is that you take your software to the wall that separates development and operations, and throw it over and then forget about it. Not at Amazon. You build it, you run it. This brings developers into contact with the day-to-day operation of their software. It also brings them into day-to-day contact with the customer. This customer feedback loop is essential for improving the quality of the service.”

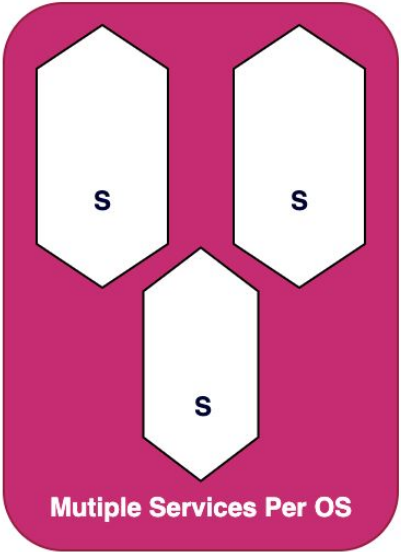

-- Werner Vogels in “A conversation with Werner Vogels” in ACM Queue, May 2006

Principle 5: Deploy Independently

- One Service Per OS
- Consumer-Driven Contracts
- Multiple coexisting versions

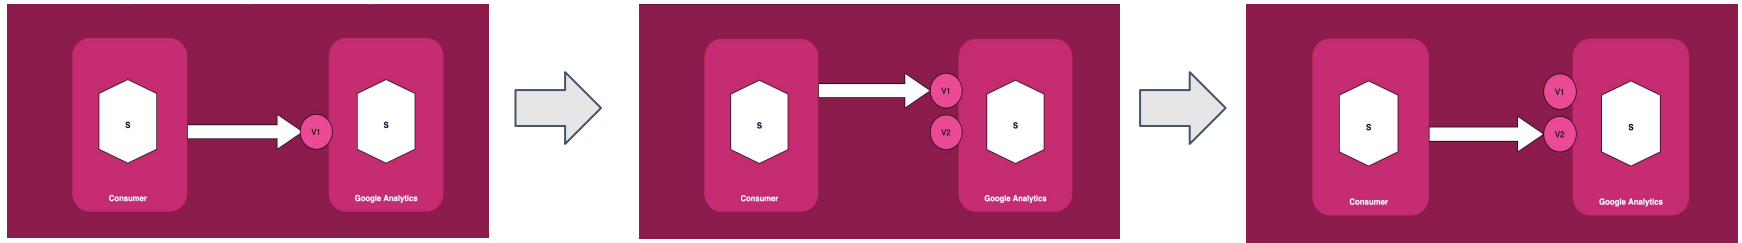

One Service Per OS

Consumer-Driven Contracts

Multiple coexisting versions

Principle 6: Consumer First

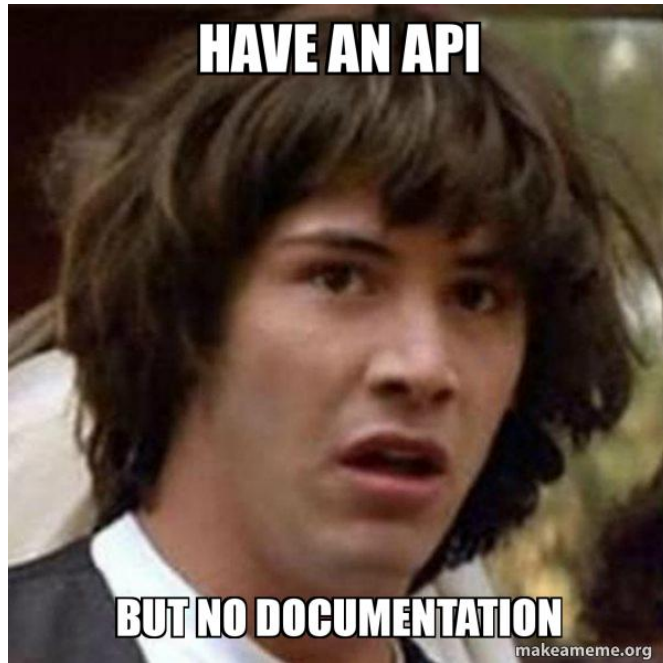

- Encourage conversations
- API Documentation
- Service Discovery

Encourage conversations

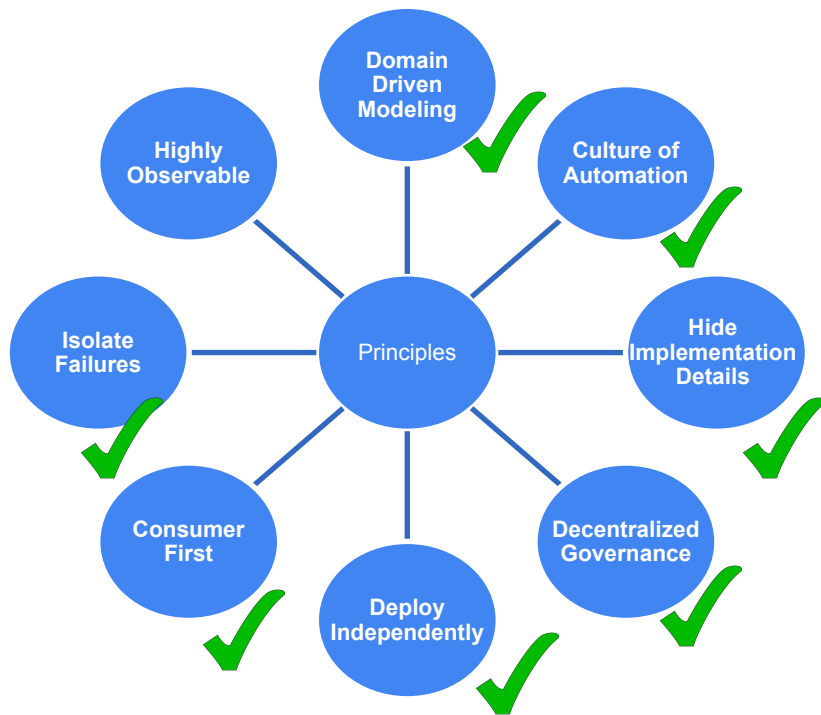

API Documentation

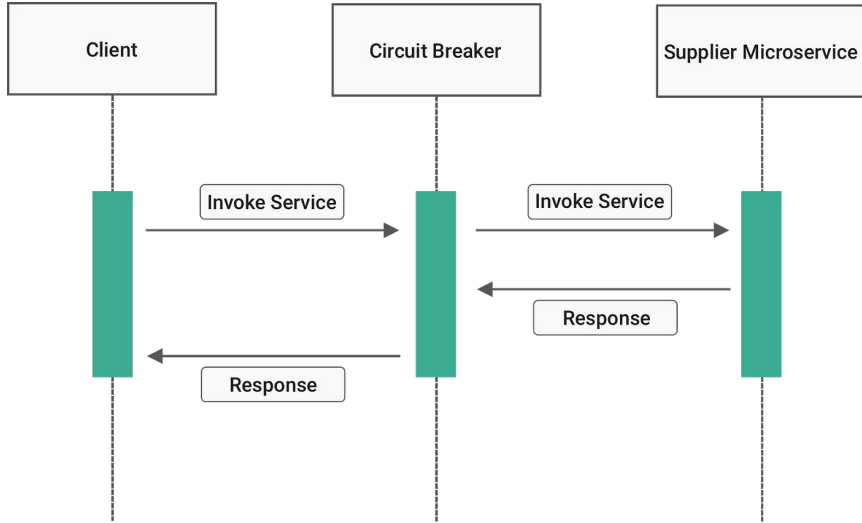

Swagger™

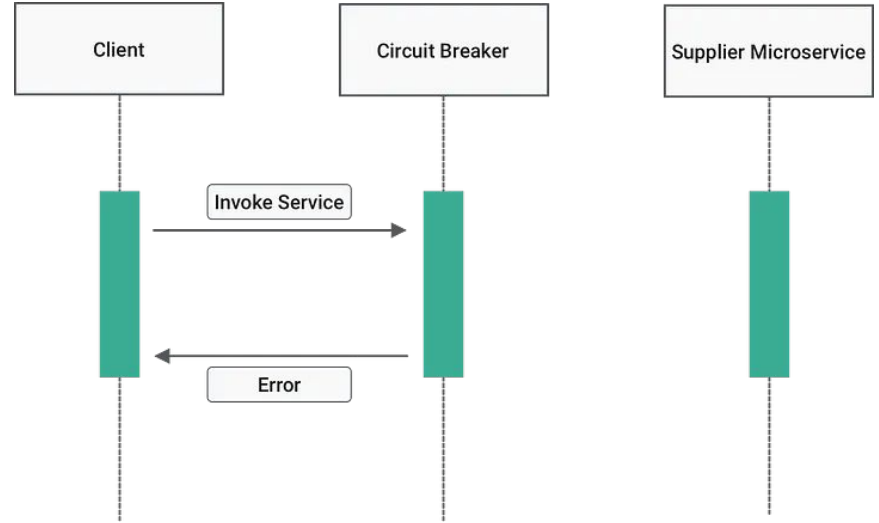

Principle 7: Isolate Failure

- Avoid cascading failures
- Timeouts between components
- **Fail fast** aka *Design for Failure*
 - Bulkheading / Circuit breakers

Closed circuit

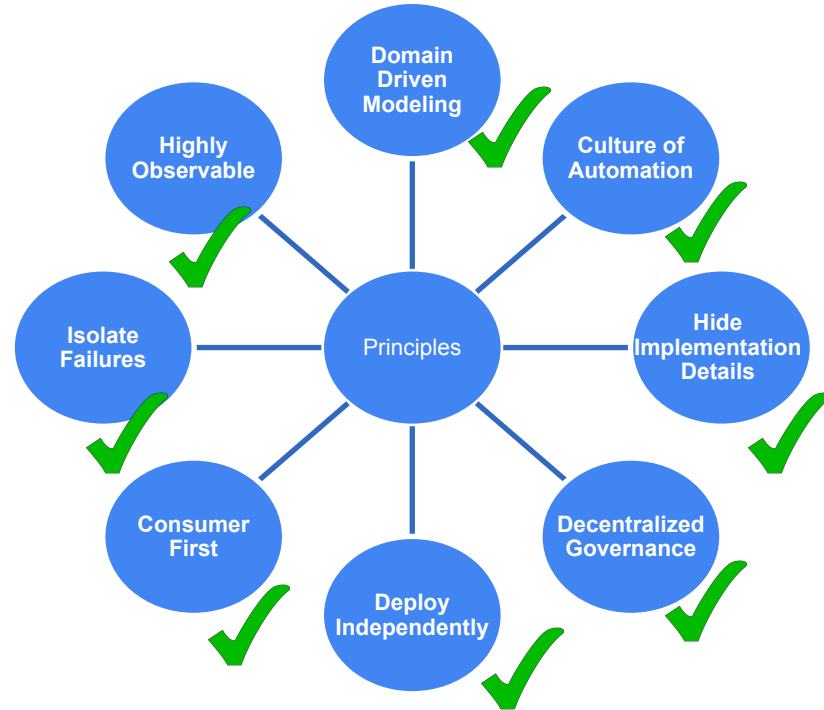

Open circuit

Image source: blogs.halodoc.io

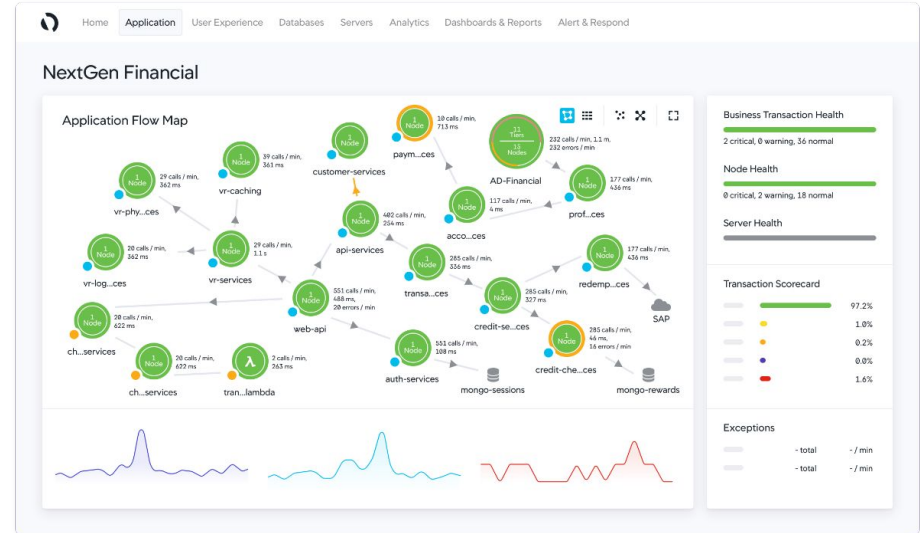

Principle 8: Highly Observable

- Standard Monitoring
- Health-Check Pages
- Log and Stats aggregation
- Downstream monitoring

Principle 8: Highly Observable

- Standard Monitoring
- Health-Check Pages
- Log and Stats aggregation
- Downstream monitoring

Sam Newman's Principles of Microservices

Are microservices always the right choice?

Microservices overhead

for less-complex systems, the extra baggage required to manage microservices reduces productivity

as complexity kicks in, productivity starts falling rapidly

the decreased coupling of microservices reduces the attenuation of productivity
